Faridabad, Haryana – 121002

EDUCATION

- Guru Jambheshwar University of Science & Technology (GJUS&T)** Hisar, India
Bachelor of Technology - Information Technology 2021 - 2025
Courses: Operating Systems (OS), Database Management Systems (DBMS), Computer Networks (CN), Theory of Computation (TOC), Systems Design, Algorithms

SKILLS SUMMARY

- Languages:** Python, Java, Advanced Bash/Shell Scripting, SQL
- Frameworks:** Jenkins (Pipelines-as-Code), ArgoCD GitOps, GitHub Actions, Docker Compose
- Tools:** Docker, Kubernetes, Terraform (IaC), Ansible, Git, GitHub, Prometheus, Grafana, JIRA
- Platforms:** Linux OS (Ubuntu Internals), Amazon Web Services (AWS Architecture, EC2, VPC, S3, IAM)
- Core Primitives:** Distributed Systems Logic, Relational Schemas, Port Mapping, Service Discovery, Uptime Metrics

TECHNICAL EXPERIENCE

- Multi-Environment Infrastructure & Automation Track** Independent Practice
DevOps & Systems Engineering Practitioner April 2026 - Present
 - Hosting Compute Design:** Provisioned high-availability cloud layouts on AWS using Terraform modules, configuring Nginx reverse proxies for secure web routing and using PM2 cluster supervision to maintain reliable application self-healing and uptime.
 - Release Engineering:** Implemented automated multi-environment CI/CD release tracks with Jenkins and GitHub Actions, incorporating automated unit testing, syntax validation check gates, and ArgoCD GitOps loops to increase deployment velocity.
 - Platform Telemetry:** Programmed modular Python and Bash telemetry daemons anchored in Linux networking internals to capture live compute resource allocations, parsing network connection states to dynamically audit production metrics.

PROJECTS

- Automated GitOps Engine & CI/CD Release Pipeline (Jenkins, ArgoCD, GitHub Actions):** Built a high-throughput, standardized continuous integration framework capable of handling multi-stage syntax compilation, structural code linting, and automated testing gates efficiently. Implemented declarative configurations and state reconciliation loops to eliminate manual infrastructure drift and ensure safe, repeatable promotions.
- Multi-Container Platform Isolation & Microservices Network (Docker, Docker Compose, Kubernetes, Terraform):** Containerized a decoupled software application ecosystem, constructing optimized multi-stage Dockerfiles to minimize container image footprints and secure deployment boundaries. Designed isolated container networking topologies using custom virtual network bridges to facilitate private cross-tier service discovery while completely closing public host interface exposure.

ACHIEVEMENTS

- DevOps Journey:** Spearheaded a targeted 70-day intensive engineering sprint covering advanced Linux systems administration, cloud architecture, and declarative platform automation.
- Core CSE Focus:** Achieved deep technical proficiency across core computer science fundamentals, consistently cracking complex problem-solving patterns for competitive postgraduate entrance tracks.
- Leadership Recognition:** Commended by the Training & Placement Cell at GJUS&T for exceptional team synchronization and impact in accelerating student placement conversion metrics.

VOLUNTEER EXPERIENCE

- Speakathon Club under Training and Placement Cell, GJUS&T** Hisar, India
Club Coordinator July 2023 - July 2024
 - Leadership:** Led a cross-functional student team to design, organize, and execute communication bootcamps, technical presentation sessions, group debates, and simulated mock interviews for 200+ engineering candidates.
 - Impact:** Boosted candidate placement readiness and professional confidence by establishing systematic workshops focused on interview mechanics, public speaking, and team collaboration.
